

One of the most exciting Hotel developments in recent years has been created near Tower Bridge in London.

The Grange Tower Hotel in E1 will provide levels of luxury and facilities which few other Hotels can achieve.

The external façade is completely fresh and reflects the architects' vision for a modern London. This 18 floor prestigious hotel development provided an opportunity for Sassi Lift Systems to work closely with the main Lift contractor (Specialist Lift Services) to design bespoke full height glass panel lift doors to utilise the natural light transmitting through the elegant internal open plan public areas, which is maximised by the decision of the lift contractor to specify low iron "Meiller Optiwhite glass".

The door system is produced by door specialist "Meiller" located in Munich, Germany, meeting all current European

standards and providing what we believe to be one of the most pleasing aesthetic visions found in contemporary hotels of today, while maintaining a total focus on safety by incorporating features such as specially designed door frame post geometry in combination with glass panels minimising the risk of injury to children's hands.

Sassi Lift Systems would like to thank Specialist Lift Services for selecting Meiller Doors for the Tower Hotel.

SASSI LIFT SYSTEMS

Specialists in the supply of equipment to the lift industry for both modernisations and new lift projects

offering advice and technical support to our contractor clients and consultants alike from the initial project survey through to final completion and beyond.

We are proud to be working with Grange Hotels on the Grange Tower Hotel project
